

# SEER360 SOLUTIONS

Find your data, Keep it found

## Discover Materials Expertise

SEER360 Solutions brings a unique, comprehensive hierarchical commodity code system to SAP HANA implementations. With experience and expertise in materials and commodities, our team is uniquely positioned to support your specification review, clean your Material Masters, and support effective master data governance and management. All of our tools can be delivered with embedded reporting so you see how we are managing your data, and how we support your materials management solutions. Our unique approach is not only what differentiates us, but also what makes us successful. We provide specialized industrial materials services and solutions to help organizations manage materials more effectively, achieve purchasing success, and leverage organizational spend through SAP in ways never before possible.

- Embedded Commodity Code Management
- 400,000+ active, proven commodity codes
- 150+ line classes
- Built in library to perform deep cleanse on existing commodity codes
- Version and Specification Management

### Specification Generator

- Unique to Seer360 - Commodity Code Management is delivered as a Service (CMaaS)
- Built on SAP HANA framework
- Enables SAP HANA 2.0 workflow management for governance
- Real time integration between applications

**Deep Cleanse**

**Data Governance & Management**

Find your data, Keep it found

## Service Offerings

### Specification Generation & Implementation

We bring a wealth of Line Class experience and engineering as well as materials expertise. Only data that can be organized can be managed. We solve specification challenges and get data in the system right the first time. With decades of experience and a commodity code list proven on multi-billion dollar industrial projects, we can support the cleansing of specifications, which lead to standardized materials codes across projects, business units and locations. At SEER360, we combine our insights and skills to transform your materials and strategies, supporting the deep data that SAP delivers, allowing clients to leverage their spend more effectively. We're proud to help shape and improve how our clients structure and manage their data.

- Over 400,000 + Commodity Codes
- 29+ Projects over \$100 M each using our codes
- \$2B+ largest capital project directly managed with our codes
- 160+ Years of Materials & Commodity Experience in our Leadership Team.
- Fast and effective implementation designed for SAP Hana

### Deep Data Cleansing

SEER360 brings domain expertise in commodity codes, materials management and data management to our legacy data commodity code engagements. We leverage intelligent coding tools, HANA text analytics and Machine Learning tools to cleanse data efficiently and accurately. Our HANA AI tools help us efficiently sort through volumes of vendor data, purchasing data and current, often duplicated, codes to move our commodities into MAGUS classifications. Our interactive tool can engage business users to validate and approve the data before moving it to the SAP HANA enterprise application. Our proprietary code supports commodity management and spend leveraging.

### Commodity Code Management as a Service (CMaaS)

Companies don't stay still. And neither does their data. SEER360 tools provide a commodity code management and governance framework to maintain and increase data quality. We are bring Code Management as a Service (CMaaS) to the market for the first time ever. Building on our legacy services, SEER360 provides ongoing commodity code support as new projects kick off, new vendors are brought on board, as new corporate acquisitions happen and as new materials requirements are identified. Quarterly updates ensure that the data starts clean and stays clean, allowing our clients to efficiently leverage their spend across the organization regardless of their complexity, growth trajectory or legacy code challenges.

Contact us for more information, to hear how we help your materials team take back ownership of your commodities, to book a demo or see our tools in action.
